

Microbiome Information for: Age-Related Macular Degeneration and Glaucoma

For prescribing Medical professionals Review

The suggestions below are based on an Expert System (Artificial Intelligence) modelled after the MYCIN Expert System produced at Stanford University School of Medicine in 1972. The system uses over 1,800,000 facts with backward chaining to sources of information. The typical sources are studies published on the US National Library of Medicine.

Many recent studies has found that symptoms and symptom severity has strong associations to the microbiome for many conditions. Correcting the microbiome dysfunction is beleived to reduce the severity of symptoms. In some cases, this correction may cause symptoms to disappear.

These are a *a priori suggestions* that are predicted to independently reduce microbiome dysfunction. Suggestions should *only be done after a review* by a medical professional factoring in patient's conditions, allergies and other issues.

This report may be freely shared by a patient to their medical professionals

Best practise for making microbiome adjustments is to obtain the individuals microbiome. The following are the best microbiome to use with this expert system model. The suggestions below are intended as temporary suggestions until a test result in received.

Bacteria being reported because of atypical values.

These bacteria were reported atypical in studies of Age-Related Macular Degeneration and Glaucoma

Nota Bena: Many studies are done with a small sample size or mixtures of condition subsets which can greatly diminish the ability to detect bacteria shifts.

Bacteria Name	Rank	Shift	Taxonomy ID	Bacteria Name	Rank	Shift	Taxonomy ID
Lachnospiraceae	family	Low	186803	Roseburia	genus	High	841
Oscillospiraceae	family	Low	216572	[Eubacterium] nodatum	species	High	35518
Dorea	genus	High	189330	Eubacterium oxidoreducens	species	Low	1732
Parabacteroides	genus	Low	375288	Eubacterium ventriosum	species	High	39496

Substance to Consider Adding or Taking

These are the most significant substances that are likely to improve the microbiome dysfunction. Dosages are based on the dosages used in clinical studies. For more information see: <https://microbiomeprescription.com/library/dosages>. These are provided as examples only

Colors indicates the type of substance: i.e. probiotics and prebiotics, herbs and spices, etc. There is no further meaning to them.

Antibiotics annotated with [CFS] have been used with various degree of success with Myalgic Encephalomyelitis, Chronic Fatigue Syndrome, Chronic Lyme, Chronic Q-Fever and Long COVID conditions. Rotation of antibiotics with 3 weeks off between courses is recommended.

atorvastatin (prescription) 80 mg/day
 cefaclor hydrate (antibiotic)
 colostrum
 doxorubicin hydrochloride,(prescription)
 etoposide,(prescription)
 galacto-oligosaccharides (prebiotic) 10 gram/day
 ginger
 high-fat diets
 imipenem (antibiotic)
 loperamide hydrochloride,(prescription)
 mefloquine hydrochloride,(prescription)

METRONIDAZOLE (ANTIBIOTIC)S[CFS]
 nitrofurantoin (antibiotic)
 perhexiline maleate,(prescription)
 pinaverium bromide,(prescription)
 pivampicillin (antibiotic)
 Psyllium (Plantago Ovata Husk) 6.8 gram/day
 Slippery Elm
 triphala 9000 mg/day
 Vitamin C (ascorbic acid) 30 g/day
 Vitamin E 60 IU/day
 xylan (prebiotic)

Substance to Consider Reducing or Eliminating

These are the most significant substances have been identified as probably contributing to the microbiome dysfunction.

In some cases blood work may show low levels of some vitamins, etc. listed below. This may be due to *greedy* bacteria reported at a high level above. Viewing bacteria data on the Kyoto Encyclopedia of Genes and Genomes (<https://www.kegg.jp/>) may provide better insight on the course of action to take.

banana	metformin (prescription)
bifidobacterium bifidum (probiotics)	Moringa Oleifera
Bile Acid Sequestrant	proton-pump inhibitors (prescription)
chestnut tannins	quebracho
epinephrine	resistant maltodextrin
fasting	resistant starch
fat	tea
fructo-oligosaccharides (prebiotic)	Ursolic acid
inulin (prebiotic)	vitamin b2,Riboflavin
ketogenic diet	Vitamin B9,folic acid
lactobacillus plantarum (probiotics)	zinc
