

## Microbiome Information for: Epilepsy

### For prescribing Medical professionals Review

The suggestions below are based on an Expert System (Artificial Intelligence) modelled after the MYCIN Expert System produced at Stanford University School of Medicine in 1972. The system uses over 1,800,000 facts with backward chaining to sources of information. The typical sources are studies published on the US National Library of Medicine.

Many recent studies has found that symptoms and symptom severity has strong associations to the microbiome for many conditions. Correcting the microbiome dysfunction is beleived to reduce the severity of symptoms. In some cases, this correction may cause symptoms to disappear.

These are a *a priori suggestions* that are predicted to independently reduce microbiome dysfunction. Suggestions should *only be done after a review* by a medical professional factoring in patient's conditions, allergies and other issues.

**This report may be freely shared by a patient to their medical professionals**

---

Best practise for making microbiome adjustments is to obtain the individuals microbiome. The following are the best microbiome to use with this expert system model. The suggestions below are intended as temporary suggestions until a test result in received.

## Bacteria being reported because of atypical values.

These bacteria were reported atypical in studies of Epilepsy

*Nota Bena:* Many studies are done with a small sample size or mixtures of condition subsets which can greatly diminish the ability to detect bacteria shifts.

## Substance to Consider Reducing or Eliminating

These are the most significant substances have been identified as probably contributing to the microbiome dysfunction.

In some cases blood work may show low levels of some vitamins, etc. listed below. This may be due to *greedy* bacteria reported at a high level above. Viewing bacteria data on the Kyoto Encyclopedia of Genes and Genomes (<https://www.kegg.jp/>) may provide better insight on the course of action to take.

amoxicillin (antibiotic)s[CFS]  
ampicillin (antibiotic)s[CFS]  
benzylpenicillin sodium (antibiotic)  
cinnamon (oil. spice)  
ciprofloxacin (antibiotic)s[CFS]  
garlic (allium sativum)  
gentamicin (antibiotic)s  
imipenem (antibiotic)s

lactobacillus casei (probiotics)  
ofloxacin (antibiotic)s  
oregano (origanum vulgare, oil) |  
piperacillin-tazobactam (antibiotic)s  
trimethoprim (antibiotic)s  
triphala  
vancomycin (antibiotic)[CFS]  
Vitamin B-12
