

## Microbiome Information for: benign prostatic hyperplasia

### For non-prescribing Medical professionals Review

The suggestions below are based on an Expert System (Artificial Intelligence) modelled after the MYCIN Expert System produced at Stanford University School of Medicine in 1972. The system uses over 1,800,000 facts with backward chaining to sources of information. The typical sources are studies published on the US National Library of Medicine.

Many recent studies has found that symptoms and symptom severity has strong associations to the microbiome for many conditions. Correcting the microbiome dysfunction is beleived to reduce the severity of symptoms. In some cases, this correction may cause symptoms to disappear.

These are a *a priori suggestions* that are predicted to independently reduce microbiome dysfunction. Suggestions should *only be done after a review* by a medical professional factoring in patient's conditions, allergies and other issues.

**This report may be freely shared by a patient to their medical professionals**

---

Best practise for making microbiome adjustments is to obtain the individuals microbiome. The following are the best microbiome to use with this expert system model. The suggestions below are intended as temporary suggestions until a test result in received.

## Bacteria being reported because of atypical values.

These bacteria were reported atypical in studies of benign prostatic hyperplasia

*Nota Bena:* Many studies are done with a small sample size or mixtures of condition subsets which can greatly diminish the ability to detect bacteria shifts.

<b>Bacteria Name</b>	<b>Rank</b>	<b>Shift</b>	<b>Taxonomy ID</b>
----------------------	-------------	--------------	--------------------

Oscillospiraceae	family	Low	216572
------------------	--------	-----	--------

Eisenbergiella	genus	Low	1432051
----------------	-------	-----	---------

<b>Bacteria Name</b>	<b>Rank</b>	<b>Shift</b>	<b>Taxonomy ID</b>
----------------------	-------------	--------------	--------------------

Escherichia	genus	High	561
-------------	-------	------	-----

Shigella	genus	High	620
----------	-------	------	-----

## Substance to Consider Adding or Taking

These are the most significant substances that are likely to improve the microbiome dysfunction. Dosages are based on the dosages used in clinical studies. For more information see: <https://microbiomeprescription.com/library/dosages>. These are provided as examples only

Colors indicates the type of substance: i.e. probiotics and prebiotics, herbs and spices, etc. There is no further meaning to them.

aspartame (sweetner)

beef

cadium

carboxymethyl cellulose (prebiotic)

carob

colinfant e.coli probiotics

galacto-oligosaccharides (prebiotic) 10 gram/day

glucose (sugar)

grape polyphenols

green-lipped mussel

iron 400 mg/day

lactulose

linseed(flaxseed) 30 mg/day

l-proline

navy bean

red alga Laurencia tristicha

symbioflor 2 e.coli probiotics

vitamin a 25000 IU/day

## **Retail Probiotics**

Over 260 retail probiotics were evaluated with the following deemed beneficial with no known adverse risks.

**symbiopharm / symbioflo 2**

**Note: Some of these are only available regionally – search the web for sources.**

## Substance to Consider Reducing or Eliminating

These are the most significant substances have been identified as probably contributing to the microbiome dysfunction.

In some cases blood work may show low levels of some vitamins, etc. listed below. This may be due to *greedy* bacteria reported at a high level above. Viewing bacteria data on the Kyoto Encyclopedia of Genes and Genomes (<https://www.kegg.jp/>) may provide better insight on the course of action to take.

bacillus subtilis (probiotics)

barley

clostridium butyricum (probiotics), Miya, Miyarisan

Curcumin

enterococcus faecium (probiotic)

garlic (allium sativum)

inulin (prebiotic)

lactobacillus casei (probiotics)

lactobacillus paracasei (probiotics)

lactobacillus plantarum (probiotics)

lactobacillus reuteri (probiotics)

lactobacillus rhamnosus gg (probiotics)

oregano (origanum vulgare, oil) |

resistant starch

soy

thyme (thymol, thyme oil)

triphala

Vitamin B-12

whey

## Sample of Literature Used
